About Eco Solar Lighting

Eco Solar Lighting specialises in the pioneering and development of a wide range of eco-friendly solar lighting solutions. Manufactured for Australian conditions, our solar lighting products are designed to provide cost effective and environmentally friendly alternatives to illuminate the surrounding landscape.

Utilising solar lighting as an alternative to traditional lighting provides many benefits for both the user and the environment. Being completely independent from the main power grid, solar lights can be utilised within remote and sensitive areas whilst eliminating on-going operating costs and the need for underground trenching and wiring.

We proudly supply many of Australia's major companies, government utilities, mines, hospitals, airports and councils. Our vast experience includes supplying exceptional solar street lighting products with telescopic poles to mining companies like Rio Tinto Limited among others.
